Characteristic tetanus infection in disaster-affected areas: case study of the Yogyakarta earthquakes in Indonesia

Agung Budi Sutiono^{1,2*}, Andri Qiantori¹, Hirohiko Suwa¹, Toshizumi Ohta¹**Correction**

After publication of this work [1], we noted that we inadvertently failed to include the new version of figure two that needs correction. The location of “RS Ludira Husada” is near Yogyakarta, not near “Nglipar”. This change will not alter the statistical analysis and results since we used the corrected version of figure two (fig. 1 in this manuscript) for calculation. We profusely regret this mistake and offer our sincerest apologies and correct the figure two as below.
